## Important Note

The OsteoCentric Long Fastener Set (featuring 2.7mm & 3.5mm Long Fasteners) complements the versatile OsteoCentric Small Fragment Set. The instrument and implant sets can be utilized separately or in conjunction.

Reference Surgical Technique Guide TR-001-LBL-0002 for the Osteocentric Small Fragment Set surgical instructions which includes Compression, Reconstruction, 1/3 Tubular, and Distal Fibula plates along with 3.5mm, 3.3mm, and 2.7mm interlocking screw fasteners that work in any plate hole for customized constructs for each patient.

## Description

The OsteoCentric Trauma Long Screw Fastener Set consists of cortical fasteners in a variety of lengths and diameters to accommodate different anatomic sizes of patients. This set offers a larger range of implants which better equips physicians to choose the best implant for the anatomy. This set also includes washers and select instrumentation, which has been lengthened to facilitate implantation in anatomies which are located deep within the soft tissue. All implants are made of FDA approved stainless steel per ASTM F138, and all instrumentation materials are FDA approved.

The OsteoCentric Long Fastener Set uses all standard instrumentation familiar to orthopedic surgeons. Fasteners are currently available in stainless steel.

## Instrument Set

- Long Hex Driver: 110104
- Long Hex Driver Fixed 300mm: 110703
- 2.5mm Hex Driver Sleeve: 110701
- Depth Gauge For Small Frag 150mm: 110206
- Screw Fastener Holding Forceps: 110705

### 2.7mm Long Screw Fastener Drill Bits

- 2.0mm Drill 145mm, Calibrated: 110039
- 2.7mm Drill Bit 100mm: 110016

### 3.5mm Long Screw Fastener Drill Bits

- 2.5mm Drill Bit Calibrated 200mm: 110040
- 3.5mm Drill Bit 110mm: 110028

### Long Screw Fastener Taps

- 2.7mm Cortical Screw Fastener Tap 145mm: 110402
- 3.5mm Cortical Screw Fastener Tap 200mm: 110454

**Note:** Fastener specific Drill Bits and Taps are located in the Screw Fastener implant caddies.

## Screw Fastener Implant Caddies

### 2.7mm Long Screw Fastener

- 34mm - 50mm, 2mm increments
- 50mm - 110mm, 5mm increments
- 327-1xxx

### 3.5mm Long Screw Fastener

- 52mm - 88mm, 2mm increments
- 90mm - 130mm, 5 mm increments
- 335-1xxx

### 7mm Washer

- 300-0701

## Indications for Use

The OsteoCentric Trauma Long Screw Fastener System is intended for fixation of fractures, osteotomies, and non-unions of the clavicle, scapula, olecranon, humerus, radius, ulna, pelvis, tibia, and fibula, including periarticular and intraarticular fractures.

## Contraindications

- Active or latent infection
- Insufficient quantity or quality of bone/soft tissue
- Material sensitivity - If suspected, tests should be performed prior to implantation
- Sepsis
- Patients who are unwilling or incapable of following postoperative care instructions
- Spinal fixation - This device is not intended for screw attachment or fixation to the posterior elements (pedicles) of the cervical, thoracic, or lumbar spine

## Potential Adverse Events

Adverse reactions may include but are not limited to:

- Clinical failure (i.e. pain or injury) due to bending, loosening, wear and tear, fracture of implant, loss of fixation, dislocation and/or migration
- Pain, discomfort, and/or abnormal sensations due to the presence of the implant
- Primary and/or secondary infections
- Allergic reactions to implant material
- Limb shortening due to compression of the fracture or bone resorption
- Necrosis of bone or decrease of bone density
- Injury to vessels, nerves and organs
- Hematoma and/or impaired wound healing; hemorrhage

## Ilium or Iliac Wing 3.5mm Long Fastener Technique

**Note:** If dense, hard bone or excessive insertion torque is encountered, confirm the proper drill bit size has been utilized. If it has, it is recommended to use the appropriately sized Tap to prepare the bone for screw insertion.

1. Utilize the 2.5mm Fastener Drill Bit to prepare the bone for Fastener insertion.
2. Measure Fastener length using the provided Depth Gauge.
3. Confirm the appropriate implant length and diameter has been selected and insert the Fastener using the preferred 2.5mm Hex Driver.
4. If necessary, insert additional Fasteners as appropriate for the fracture.

**Note:** If a plate is utilized at the fracture site, a lag screw technique can be used through the plate by overdrilling the near cortex (Figure 1) with the 3.5mm Drill Bit.

Figure 1

## Plateau Fracture 2.7mm Long Fastener Technique

**Note:** If dense hard bone or excessive insertion torque is encountered, confirm the proper drill bit size has been utilized. If it has, it is recommended to use the appropriately sized Tap to prepare the bone for screw insertion.

1. Utilize the 2.0mm Fastener Drill Bit to prepare the bone for Fastener insertion.
2. Measure Fastener length using the provided Depth Gauge.
3. Confirm the appropriate implant length and diameter has been selected and insert the Fastener using the preferred 2.5mm Hex Driver.
4. If necessary, insert additional Fasteners as appropriate for the fracture.

**Note:** If a plate is utilized at the fracture site, a lag screw technique can be used through the plate by overdrilling the near cortex with the 2.7mm Drill Bit.
